LoadTrade Overview

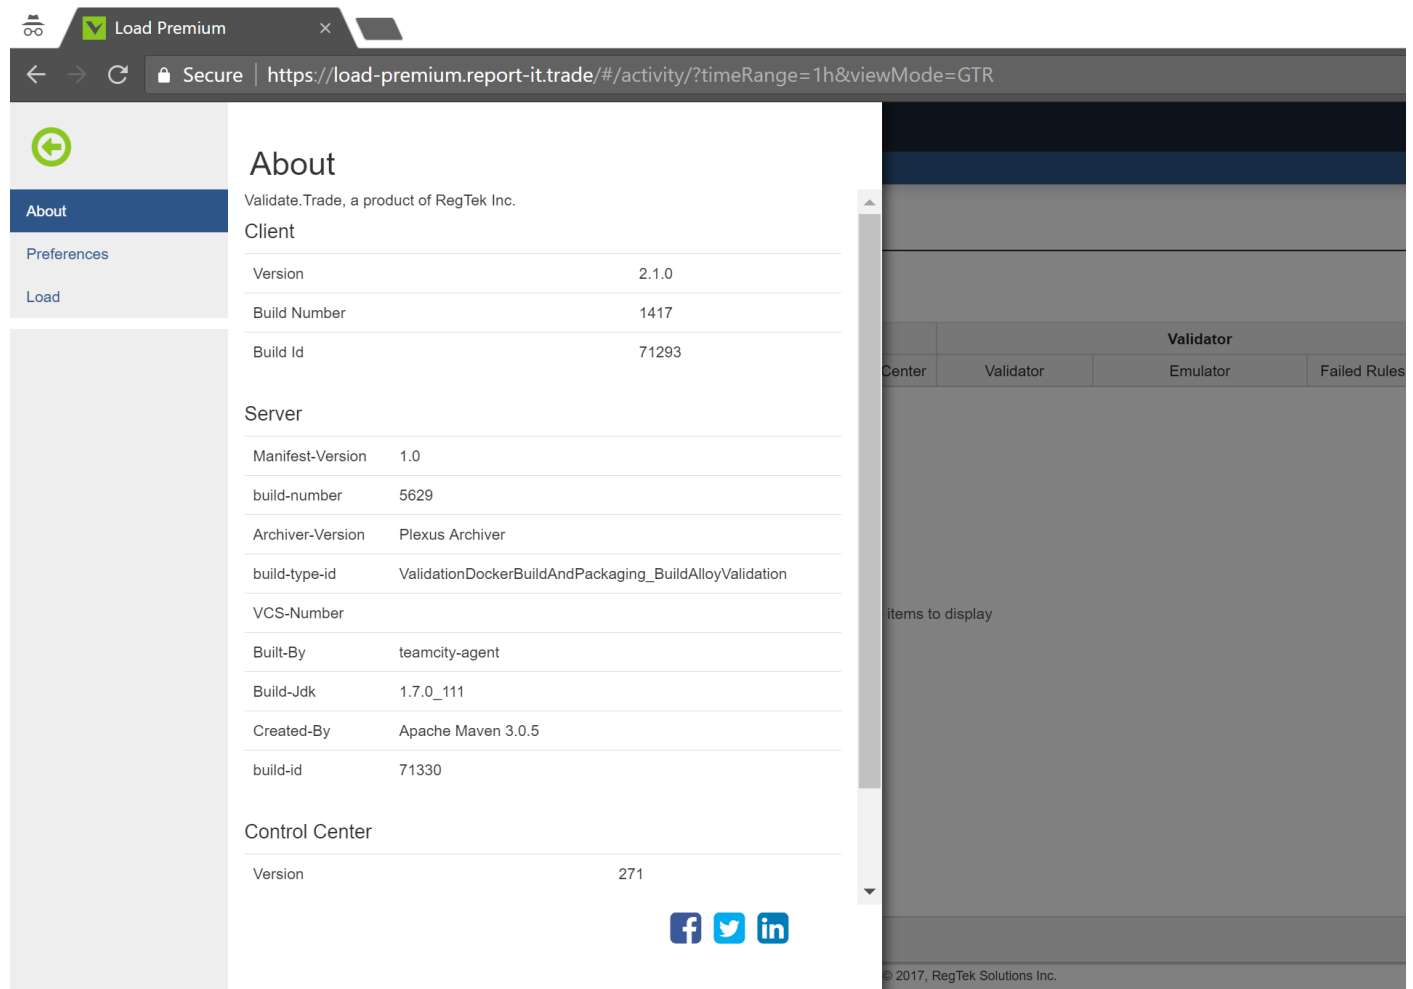

LOADTRADE	Product Description/Specifications
	<p>LoadTrade enables the uploading and pre-validation of trade reporting files configured for reporting to the DTCC GTR (Global Trade Repository) or Unavista ARM. LoadTrade supports CSV and XML (FpML or ISO20022) files.</p> <p>LOADTRADE integrates with VALIDATETRADE to provide the validation of messages as well as the flattening of XML based messages into a flat structure.</p> <p>Typical use cases for LOADTRADE include:</p> <ul style="list-style-type: none"> • Ad-hoc reporting outside of the main strategic reporting flow • Data Gatekeeper Function – Exception Management • Testing and developing Transaction reporting messages. • Backloading/Trade Replay <p>LOADTRADE PRO and LOADTRADE PREMIUM use the same underlying architecture, however LOADTRADE PREMIUM includes an additional integration with our CONTROL CENTER DASHBOARD.</p>

LoadTrade PREMIUM User Interface

The screenshot shows the LoadTrade PREMIUM web application interface. The browser address bar displays the URL: <https://load-premium.report-it.trade/#/activity?timeRange=1h&viewMode=GTR>. The application header includes the "REPORT-IT.Trade | LOAD PREMIUM" logo and a user welcome message: "Welcome, romans.krjukovs@riskfocus.com". The main navigation bar contains tabs for "File", "Home", "View", "Rules 9085", and "Message Generator". The "View" tab is active, showing a sub-navigation bar with "Activity", "Activity Details", "Message", "Validator Results", and "Emulator Results". The "Activity" tab is selected, displaying a table with columns for "Upload", "Validator", and "Reporting Target". The table is currently empty, showing "No items to display". The footer includes a pagination bar with "20 items per page" and a copyright notice: "Copyright © 2017, RegTek Solutions Inc."

File>About

Details the version information.

Setting Preferences

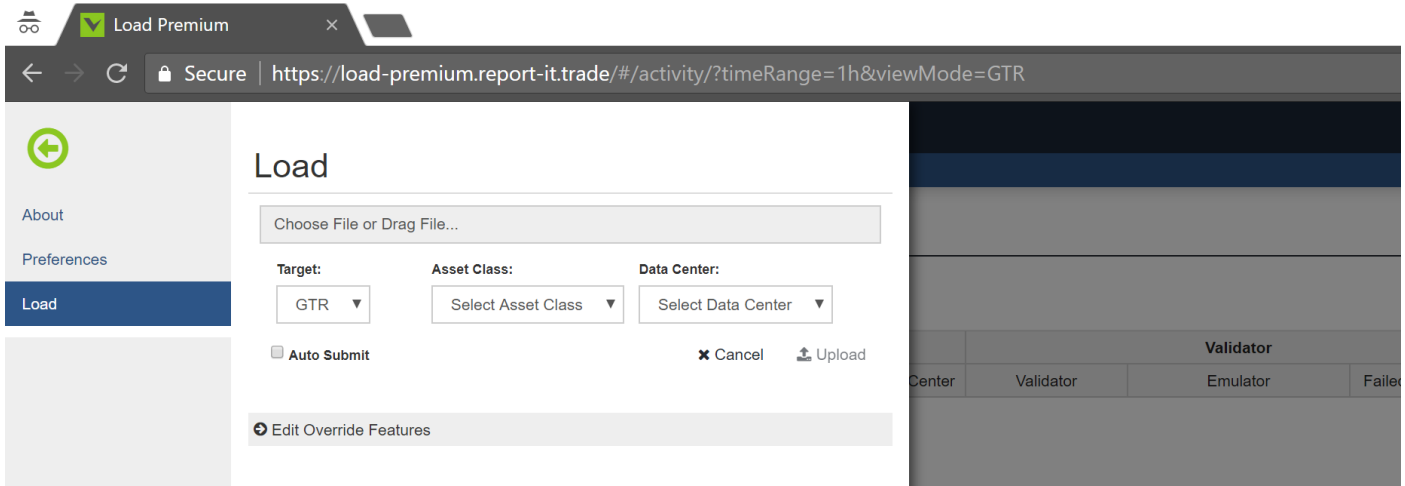

File>Preferences

Users have the ability to set default destination target, asset class and data center by simply selecting their preference from the drop down menus and checking the set as default box. Checking the 'Override Features' check box will open the feature list allowing the user to enable/disable any number of features by selecting on or off under the status toggle. Preferences are stored on a per user basis.

Features allow the user to enable or disable rules for specific business reasons. They are often used to give a preview of functionality not yet live in the GTR. For example, at time of writing there is a feature called **EMIR RTS ReWrite** which, when enabled, will enable the validation for this regulatory change scheduled for Nov 2017. The standard defaults are to have no features enabled.

Auto-Submit Checkbox can be checked at anytime. This will ensure that a clean file with no validation errors will be automatically submitted to the GTR.

Loading a File – CSV or FpML

File>Load

Users can either drag/drop a file into the screen or browse to the required file. If any default preferences have previously been set these will automatically be selected. The user has the ability to change any selection here and the change will be maintained for the individual upload before returning to the defaults.

Note: When loading a file, users should note that headers/footers are NOT part of the input file. LoadTrade will insert the appropriate headers when sending to the GTR.

Once the user clicks upload, the file will be ingested and validated. The Activity tab displays a summary view of activity from left to right.

- File Upload (including file name, time/date stamp, record count, asset class and data center).
- Validator section displays a summary of the validator results, emulator results and a failed rule count.
- Reporting Target – enables user to cancel the submission or submit to the GTR. Post submission the user can also see the response time in real-time and once a response is received download the GTR file.

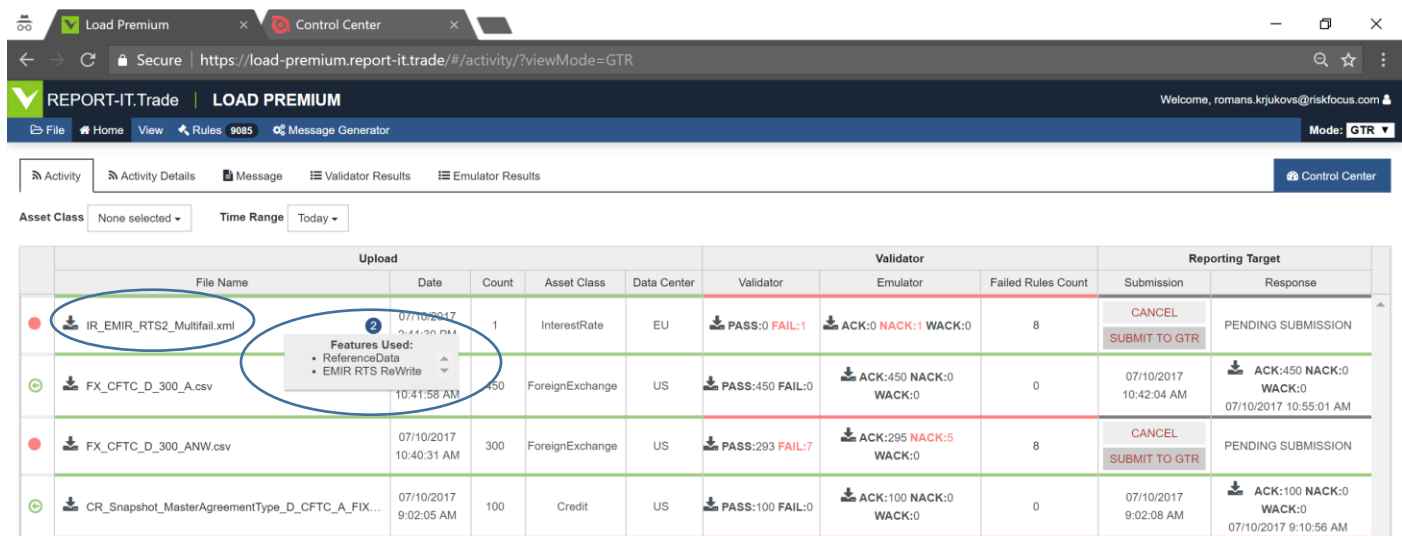

Users have a number of files that they can download from the Activity tab:

Download	Format
File	As was uploaded CSV or FpML
Validator Results	RegTek format as per list below
Emulator Results	ACK/NACK/WACK response in GTR format

Validator Results:

- USI Prefix
- USI Value
- UTI Prefix
- UTI Value
- Party 1 Transaction ID – party 1 transaction identifier
- Party 2 Transaction ID – party 2 transaction identifier
- Message ID – individual message identifier
- Rule ID – RegTek.Solutions Rule ID for any failed rules
- Field Name – offending field name for any rejection
- Reject Reason – reason for the validation failure
- Jurisdiction – regulatory jurisdiction applicable
- Sequence – the sequence in which the records were validated

If the user has selected any preferences for the upload then these are indicated by a feature pop-up icon. The blue icon will depict the number of features selected. Hovering over the icon will list those features selected.

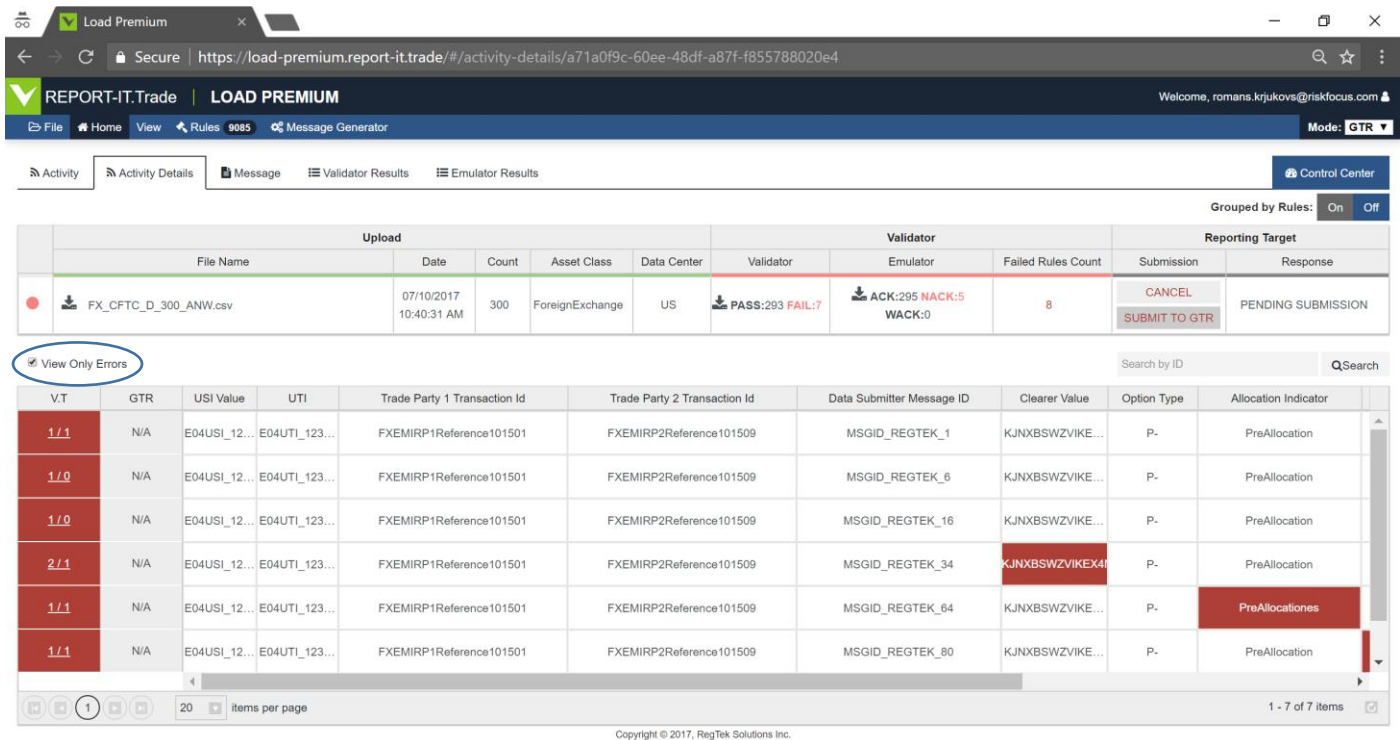

The screenshot shows the Report-It.Trade interface. The top navigation bar includes 'REPORT-IT.Trade | LOAD PREMIUM' and a user welcome message. The main content area has tabs for 'Activity', 'Activity Details', 'Message', 'Validator Results', and 'Emulator Results'. The 'Activity' tab is active, showing a table of uploads. The table has columns for 'File Name', 'Date', 'Count', 'Asset Class', 'Data Center', 'Validator', 'Emulator', 'Failed Rules Count', 'Submission', and 'Response'. A blue icon with a number '2' is visible next to the first row, indicating two features are selected. A pop-up menu shows the selected features: 'ReferenceData' and 'EMIR RTS ReWrite'.

Once the user is in the Activity Details tab they are presented, by default, with all records that contain at least one error. Simply by unchecking the 'view only errors' checkbox the user can see all records within the particular File Upload.

The columns in the View Only Errors screen are 5 standard ID fields listed below and any field containing an error. The standard ID fields are always displayed first and may also contain errors themselves.

- USI Value
- UTI
- Trade Party 1 Transaction ID
- Trade Party 2 Transaction ID
- Data Submitter Message ID

With View Only Errors checkbox marked an additional button is available, called Generate XPath. Clicking this button will automatically create a downloadable file containing the XPath links to the errors within the message.

The screenshot shows the 'LOAD PREMIUM' section of the Report-it.Trade application. The top navigation bar includes 'File', 'Home', 'View', 'Rules 9085', and 'Message Generator'. The main content area has tabs for 'Activity', 'Activity Details', 'Message', 'Validator Results', and 'Emulator Results'. A table titled 'Upload' displays file details, including 'File Name', 'Date', 'Count', 'Asset Class', and 'Data Center'. Below this, a 'Validator' section shows 'PASS:10 FAIL:3' and 'ACK:11 NACK:1 WACK:1'. A 'Reporting Target' section includes 'Submission' and 'Response'. A 'Generate XPath' button is circled in blue. Below the button, a table lists transaction details with columns for V.T, GTR, USI Value, UTI, Trade Party 1 Transaction Id, Trade Party 2 Transaction Id, Data Submitter Message ID, Allocation Indicator, and Master Agreement type.

Upload						Validator			Reporting Target	
File Name	Date	Count	Asset Class	Data Center	Validator	Emulator	Failed Rules Count	Submission	Response	
CR_Snapshot_MasterAgreementType_D_CFTC_A.xml	07/18/2017 11:55:09 AM	13	Credit	US	PASS:10 FAIL:3	ACK:11 NACK:1 WACK:1	3	CANCEL SUBMIT TO GTR	PENDING SUBMISSION	

V.T	GTR	USI Value	UTI	Trade Party 1 Transaction Id	Trade Party 2 Transaction Id	Data Submitter Message ID	Allocation Indicator	Master Agreement type
1/0	N/A	E04UT19I5...		FXEMIRP1Reference101501	FXEMIRP2Reference101501	MSGIDdc99379dfa9d449c99dd014e...	PostAllocation	XXXX
1/1	N/A	E04UT19I5...		FXEMIRP1Reference101501	FXEMIRP2Reference101501	MSGIDdc99379dfa9d449c99dd014e...	PostAllocation	ISDA
1/1	N/A	E04UT19I5...		FXEMIRP1Reference101501	FXEMIRP2Reference101501	MSGIDdc99379dfa9d449c99dd014e...	PostAllocation	ISDA

The button label will then show Download XPath's, clicking again will download the file.

This screenshot is identical to the previous one, but the button label has changed from 'Generate XPath's' to 'Download XPath's', which is circled in blue. The rest of the interface, including the tables and navigation elements, remains the same.

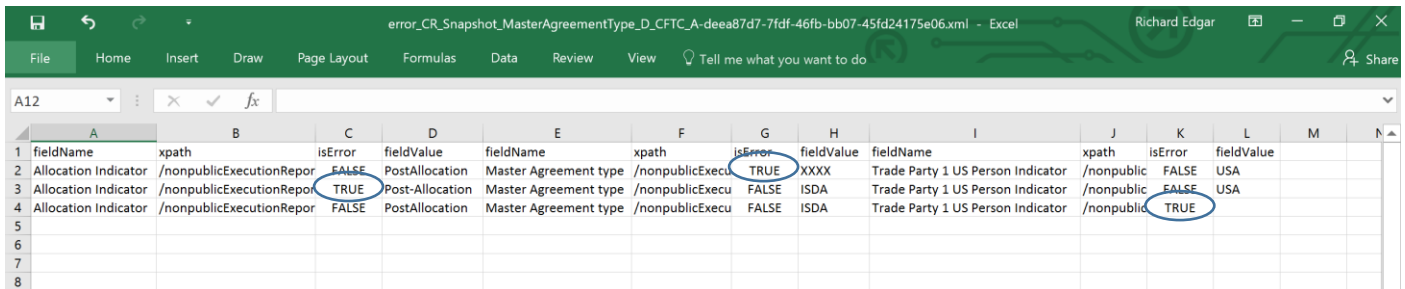

This downloaded CSV file contains a row for each record with an error and contains the same data as is available in the view only errors grid. The file contains 4 data columns for every column displayed in the grid, the grid includes the 5 ID columns plus any additional columns that contain errors. These columns are:

fieldName – field name from the record

xpath – the xpath to the fieldname

isError – true/false status. TRUE highlights here there is an error

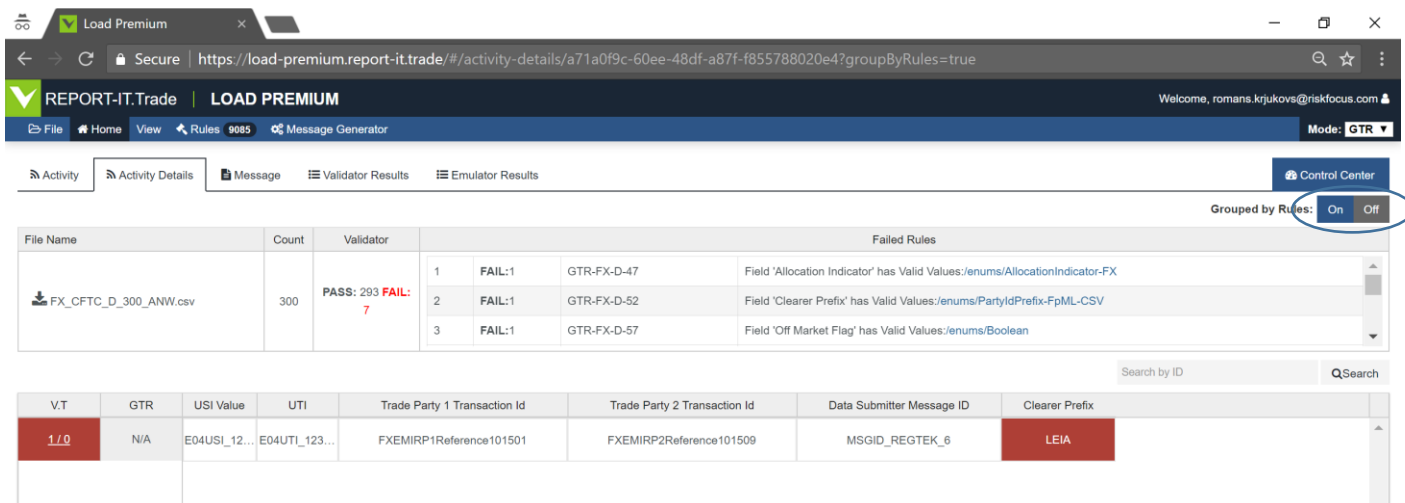

fieldValue – value within the field

field name	xpath	isError	field value	field name	xpath	isError	field value	field name	xpath	isError	field value
Allocation Indicator	/nonpublicExecutionRepor	FALSE	PostAllocation	Master Agreement type	/nonpublicExecu	TRUE	XXXX	Trade Party 1 US Person Indicator	/nonpublic	FALSE	USA
Allocation Indicator	/nonpublicExecutionRepor	TRUE	Post-Allocation	Master Agreement type	/nonpublicExecu	FALSE	ISDA	Trade Party 1 US Person Indicator	/nonpublic	FALSE	USA
Allocation Indicator	/nonpublicExecutionRepor	FALSE	PostAllocation	Master Agreement type	/nonpublicExecu	FALSE	ISDA	Trade Party 1 US Person Indicator	/nonpublic	TRUE	USA

Those records with at least one error have the offending fields highlighted in red along with the Validator/Emulator result displayed in the V.T column furthest left. Mouse-Over action enable the user to understand the particular rules that have failed per record.

The user can also toggle on the 'Group by Rules' switch in the top right corner. This will then group the failed records by the rules that have failed, enabling the user to identify where multiple records have failed the same rule.

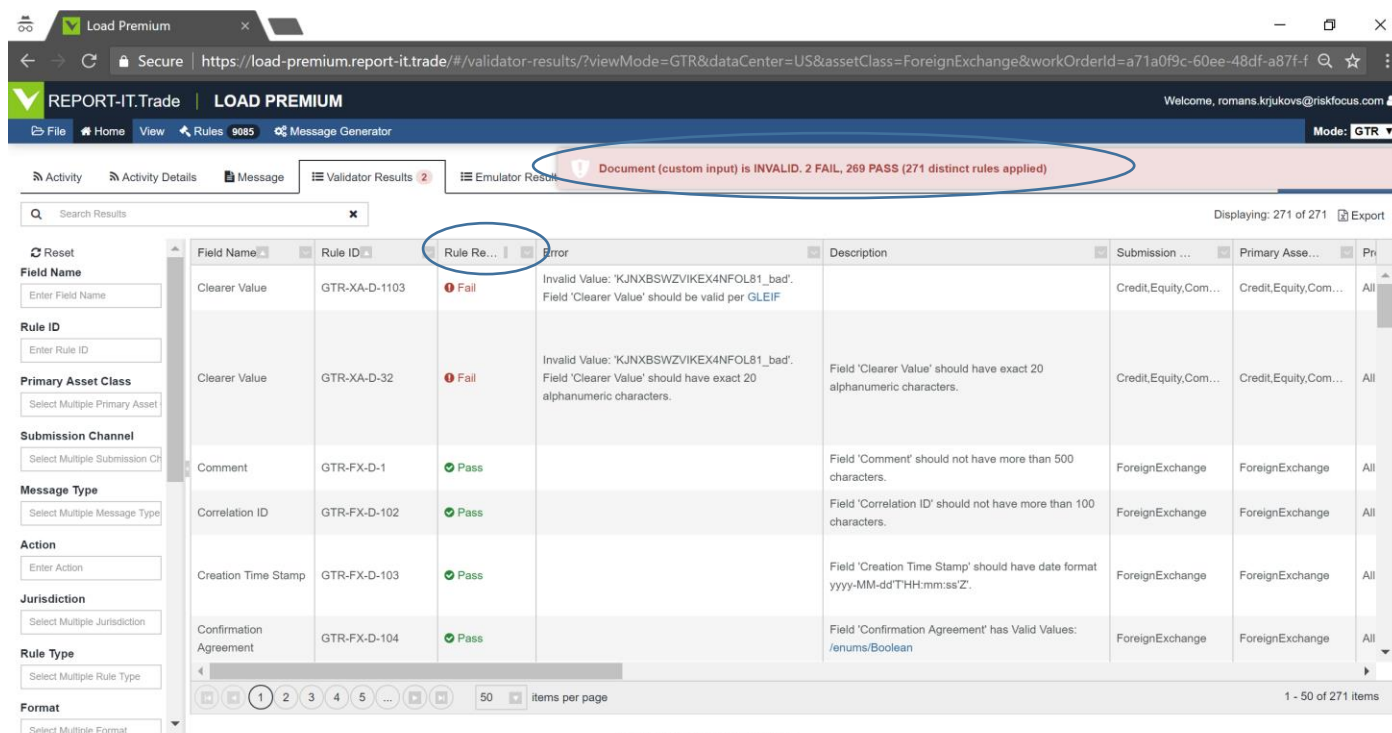

File Name	Count	Validator	Failed Rules
FX_CFTC_D_300_ANW.csv	300	PASS: 293 FAIL: 7	<div>1 FAIL:1 GTR-FX-D-47 Field 'Allocation Indicator' has Valid Values:/enums/AllocationIndicator-FX</div> <div>2 FAIL:1 GTR-FX-D-52 Field 'Clearer Prefix' has Valid Values:/enums/PartyIdPrefix-FpML-CSV</div> <div>3 FAIL:1 GTR-FX-D-57 Field 'Off Market Flag' has Valid Values:/enums/Boolean</div>

Users can drill further into the detail of a particular record by selecting 'Validate' when hovering over the errors highlighted in red.

Message Interrogation & Issue Diagnosis/Resolution using the Analyst Workbench

Validator Results Tab

Copyright © 2017, RegTek Solutions Inc.

Once a user selects Validate they are presented on the Validator Results tab with a full list of all data validation rules that were applied to the particular record. A Summary Banner in red/green depending on the result will extend in from the right hand side of the page outlining the number of rules applied with a pass/fail count.

The Rule Result column gives a pass/fail status of each individual rule applied. Scrolling to the right provides the user a detailed breakdown of the parameters for each rule. Any rules that failed will also display an error message to the user.

Validator Results can be exported as per the below example:

- Field Name - corresponding field name
- Rule ID - RegTek.Solutions rule ID
- Rule Result - rule Pass/Fail status
- Error - error message
- Description - description of the rule applied
- Submission Channel
- Primary Asset Class
- Product ID Value - relevant product ID(s) the rule is applicable to
- Message Type - message type(s) the rule is applicable to
- Jurisdiction - regulatory jurisdiction(s) the rule is applicable to
- Rule Type - rule type categorisation
- Format - message format(s) the rule is applicable to
- SPEL Conditions - any SPEL conditions associated with the rule
- Publisher - publisher details
- Regulation - regulation details
- Regulatory Rule - regulatory rule identifier where available
- Regulatory Field Name(s) - regulatory field names the rule is associated with
- Document - regulatory document as to where the rule has been derived from
- Tag - RegTek.Solutions tagging field
- Target - the target destination of the submission
- Data Center - data center(s) the rule is applicable to

The user can search the message, make in-memory changes to the message in the UI and click Validate to run an instant re-validation incorporating the most recent changes.

Users can also choose to edit the Raw CSV file or choose to export the data using the export button on the right.

FpML/CSV Split Screen

If the record is a FpML message then the user will automatically be shown a split screen view with the original FpML message on the left and a flattened view on the right. This is the same transformation processed applied by the GTR. The user is provided with Xpath links back to the FpML to highlight where the value for a particular field has been extracted from.

The user can search the message, make in-memory changes to the message in the UI and click Validate to run an instant re-validation incorporating the most recent changes.

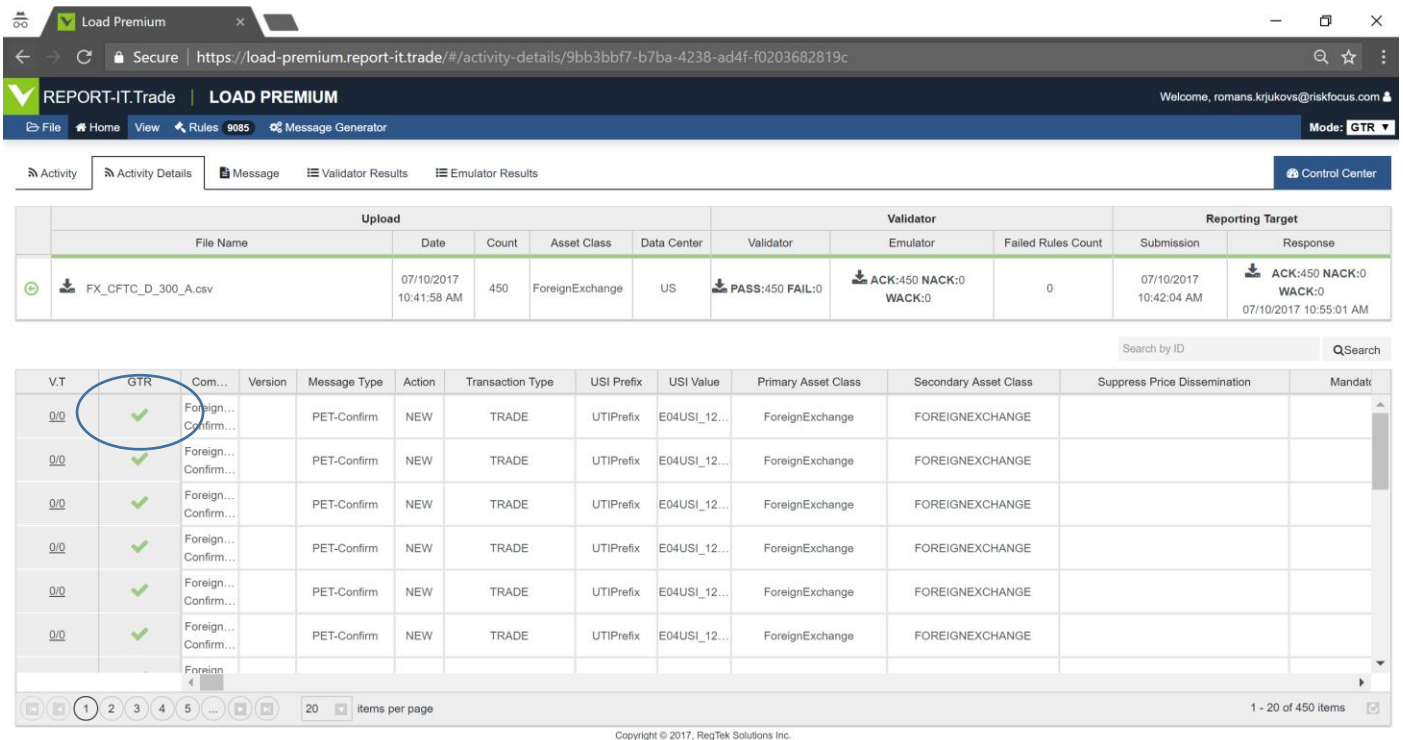

Users can also choose to view only XML by clicking XML View or choose to export the data using the export button on the right.

There are also check boxes to wrap content and for pretty print.
